

ABSTRACT

The present invention provides a technique for providing color corrected images to a user over a network.

5 In particular, the present invention allows multiple image providers to provide color corrected images to a user when the user's computer and its associated devices are not calibrated and/or characterized, or the calibration and/or characterization data is not available over the network to the image providers. This abstract is provided for the sole purpose of complying with the rules requiring an abstract to allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure contained herein. This abstract is submitted with the express
10 understanding that it will not be used to interpret or to limit the scope or the meaning of the claims.
